Ultra Refrigeration work with clients based nationwide providing world-class customer service, performance and efficiency. Our enviable customer list of end users, contractors and consultants speaks for itself. Ultra Air Conditioning prides itself on always putting the customer first, acting with total professionalism and consistency. Our goal is to always exceed expectations in terms of service, quality and communication.

Our vision is to provide integrated thermal management solutions, differentiated through innovation and service to air conditioning customers based nationwide.

## JCC Cellar Coolers

(finance options available)

Ultra provides cost effective and reliable units designed to maintain temperatures required for beer and wine cellars.

The ability of electronic control down to 4°C also prolongs the life of fresh fruit and vegetables, flowers, dairy products and other items requiring a temperature controlled environment.

There are four models in the range which operate at capacities between 2.87 – 5.82kW.

Units have 6 fins per inch, brewery specification evaporator coils and operate on refrigerant R410A.

## Bespoke Cellar Cooling

(finance options available)

To complement our range of 'off the peg' solutions, Ultra offer customised cellar cooling systems which provide increased cooling capacities and can be designed for exacting needs of real ale, premium lagers, fine wines or brewing.

Ultra have implemented award winning solutions for our customer's needs, where standard cellar cooling systems cannot be used such as long pipe runs, awkward installation locations, listed buildings, corrosive materials (finings rooms), etc

Our bespoke solutions can also integrate low GWP refrigerants, energy cost savings and heat recovery.

## Ambient Beer Cooler

(finance options available)

The ambient beer cooler uses outdoor ambient air to help keep cellars cool and save money.

Most beer cellars are kept at 10°C and the UK temperature between October and April often falls below that figure. When the outdoor temperature falls to 8°C or below, the ambient beer cooler uses the outdoor air to cool your cellar at a fraction of the cost.

For pubs and clubs the ambient beer cooler will reduce the amount of time the cellar cooler needs to operate to maintain the required temperature and save money.
